

# Multi-stakeholder Consultation FUTURE-PROOF AI ACT: TRUSTWORTHY GENERAL-PURPOSE AI

Fields marked with \* are mandatory.

## Multi-stakeholder Consultation FUTURE-PROOF AI ACT: TRUSTWORTHY GENERAL- PURPOSE AI

---

The [European AI Office](#) is launching this multi-stakeholder consultation on **trustworthy general-purpose AI models in the context of the [AI Act](#)**. We invite submissions from all stakeholders with relevant expertise and perspectives, particularly from academia, independent experts, industry representatives such as general-purpose AI model providers or downstream providers integrating the general-purpose AI model into their AI system, civil society organisations, rightsholders organisations, and public authorities.

This is an opportunity for all stakeholders to have their say on the topics covered by the first Code of Practice on detailing out rules for providers of general-purpose AI models in the context of the AI Act. It will also inform related work of the AI Office, in particular on the template for the summary about the model training data and accompanying guidance.

*Details about the AI Act rules for providers of general-purpose AI models, the Code of Practice, and related work by the AI Office can be found in the [background documents available here](#).*

**The consultation is available in English and responses can be submitted via this form over a period of seven weeks. Submissions must be completed by Wednesday, 18 September 2024, 18:00 CET.\* We encourage**

## early submissions.

In parallel, stakeholders who wish to participate in the entire process of drawing-up the first Code of Practice can [express their interest](#) here by Sunday, 25 August 2024, 18:00 CET.

### **The questionnaire for this consultation is structured along 3 sections**

#### 1. General-purpose AI models: transparency and copyright

- A. Information and documentation to providers of AI systems
- B. Technical documentation to the AI Office and the national competent authorities
- C. Policy to respect Union copyright law
- D. Summary about content used for the training of general-purpose AI models

#### 2. General-purpose AI models with systemic risk

- A. Risk taxonomy
- B. Risk identification and assessment
- C. Technical risk mitigation
- D. Internal risk management and governance for general-purpose AI model providers

#### 3. Reviewing and monitoring the General-Purpose AI Code of Practice

**We welcome full or partial replies** from all respondents based on their expertise and perspective.

**At the end of the questionnaire, you have the option to upload one document to share further information** with the AI Office. We provide a template which aligns with the topics covered in the Code of Practice and follows the structure of the Plenary Working Groups. Based on the submissions and answers to the targeted questions, a first draft of the Code of Practice will be developed.

**All contributions to this consultation may be made publicly available.**

Therefore, please do not share any confidential information in your contribution. For organisations, their organisation details would be published while

respondent details can be requested to be anonymised. Individuals can request to have their contribution fully anonymised.

**The AI Office will publish a summary of the results of the consultation.**

Results will be based on aggregated data and respondents will not be directly quoted.

**Please allow enough time to submit your application before the deadline to avoid any issues.** In case you experience technical problems which prevent you from submitting your application within the deadline, please take screenshots of the issue and the time it occurred.

In case you face any technical difficulties or would like to ask a question, please contact: [CNECT-AIOFFICE-CODES-OF-PRACTICE@ec.europa.eu](mailto:CNECT-AIOFFICE-CODES-OF-PRACTICE@ec.europa.eu)

*\*The AI Office has announced an extension of the consultation period for the Code of Practice concerning general-purpose AI models, as part of the ongoing implementation of the AI Act. The new deadline, set for 18 September 2024, replaces the previous 10 September cutoff. This will grant stakeholders overall seven weeks to submit their feedback.*

## About you

---

\* 1. Do you represent one or more organisations (e.g., industry organisation or civil society organisation) or act in your personal capacity (e.g., independent expert)?

- Organisation(s)
- In a personal capacity

\*

Please specify the name(s) of the organisation(s):

COMMUNIA Association

\* First name

Teresa

\* Surname

Nobre

\* E-Mail address (this won't be published)

teresa@communia-association.org

\* Is your organisation headquartered in the EU?

- Yes
- No
- Other (e.g. multiple organisations)

\* EU member states

- AT - Austria
- BE - Belgium
- BG - Bulgaria
- HR - Croatia
- CY - Cyprus
- CZ - Czechia
- DK - Denmark
- EE - Estonia
- FI - Finland
- FR - France
- DE - Germany
- EL - Greece
- HU - Hungary
- IE - Ireland
- IT - Italy
- LV - Latvia
- LT - Lithuania
- LU - Luxembourg
- MT - Malta
- NL - Netherlands
- PL - Poland
- PT - Portugal
- RO - Romania

- SK - Slovak Republic
- SI - Slovenia
- ES - Spain
- SE - Sweden

\*What is the size of your organisation?

- Micro (1 to 9 employees)
- Small (10 to 49 employees)
- Medium (50 to 249 employees)
- Large (250 or more employees)
- Other (e.g. multiple organisations)

\*Which stakeholder category would you consider yourself in?

- Provider of a general-purpose AI model, or acting on behalf of such providers
- Downstream provider of an AI system based on general-purpose AI models, or acting on behalf of such providers
- Other industry organisation, or acting on behalf of such organisations
- Academia
- Civil Society Organisation
- Rightsholder or a collective management organisation (CMO) or an independent management organisation (IME) or the representative of an organisation acting on behalf of rightsholders (other than a CMO or IME)
- Public authority
- Others

\* Please briefly describe the activities of your organisation or yourself:

*1000 character(s) maximum*

The COMMUNIA Association for the Public Domain is a Brussels-based international association whose mission is to foster, strengthen and enrich the Public Domain. We advocate for policies that reshape copyright, expand the public domain and strengthen the rights of users in accessing and reusing culture and knowledge.

We advance our mission through public policy advocacy and strategic litigation. Our activities include carrying out research, drafting policy papers and recommendations, organizing conferences, developing public awareness campaigns, taking part in legislative processes at the EU, national and international levels, and providing strategic litigation assistance.

Our members are civil society organizations, academics, activists and practitioners, including e.g. Wikimedia Europe, Open Knowledge Foundation and the Internet Archive. COMMUNIA is also the steward of the Public Domain Manifesto, which has over 3600 signatories (including more than 150 organizations).

### \* Availability for a follow-up conversation

We may follow up with you for clarification or further discussion if your submission prompts additional interest.

I agree to be contacted by the AI Office for a follow-up conversation to my submission.

- Yes
- No

### All contributions to this consultation may be made publicly available.

Therefore, please do not share any confidential information in your contribution. For organisations, their organisation details would be published while respondent details can be requested to be anonymised. Individuals can request to have their contribution fully anonymised. Your e-mail address will never be published.

Please select the privacy option that best suits you. Privacy options default based on the type of respondent selected.

### \* Contribution publication privacy settings

*If you represent one or more organisations: All contributions to this consultation may be made publicly available. You can choose whether you would like respondent details to be made public or to remain anonymous.*

- Anonymous.** Only organisation details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its size, its presence in or outside the EU and your contribution will be published as received. Your name will not be published. Please do not include any personal data in the contribution itself if you want to remain anonymous.
- Public.** Organisation details and respondent details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its size, its presence in or outside the EU and your contribution will be published as received. Your name will also be published.

### Privacy statement

I acknowledge the attached privacy statement.

[privacy\\_statement.pdf](#)

## Section 1. General-purpose AI models: transparency and copyright-related rules

---

### **A. Information and documentation by general-purpose AI model providers to providers of AI systems**

Providers of general-purpose AI models have a particular role and responsibility along the AI value chain, as the models they provide may form the basis for a range of downstream systems, often provided by downstream providers that necessitate a good understanding of the models and their capabilities, both to enable the integration of such models into their products, and to fulfil their obligations under the AI Act or other regulations. Therefore, model providers should draw up, keep up-to-date and make available information and documentation to providers of AI systems who intend to integrate the general-purpose AI model into their AI system. Widely adopted documentation practices include model cards and data sheets.

A minimal set of elements of information and documentation by general-purpose AI model providers to providers of AI systems is already set out in AI Act Annex XII.

1. In the **current state of the art**, for which elements of **information and documentation** by general-purpose AI model providers to providers of AI systems do **practices** exist that, in your view, achieve the **above-mentioned purpose**?

From the list below following AI Act Annex XII, please select all relevant elements.

If such practices exist, please provide **links to relevant material** substantiating your reply, such as model cards, data sheets or templates.

**A general description of the general-purpose AI model including:**

- The tasks that the model is intended to perform and the type and nature of AI systems into which it can be integrated;**

- The acceptable use policies applicable;
- The date of release and methods of distribution;
- How the model interacts, or can be used to interact, with hardware or software that is not part of the model itself, where applicable;
- The versions of relevant software related to the use of the general-purpose AI model, where applicable;
- The architecture and number of parameters;
- The modality (e.g., text, image) and format of inputs and outputs;
- The licence for the model.

A description of the elements of the model and of the process for its development, including:

- The technical means (e.g., instructions for use, infrastructure, tools) required for the general-purpose AI model to be integrated into AI systems;
- The modality (e.g., text, image, etc.) and format of the inputs and outputs and their maximum size (e.g., context window length, etc.);
- Information on the data used for training, testing and validation, where applicable, including the type and provenance of data and curation methodologies.

Alternatively:

- No practices for any of the listed elements exist that achieve the above-mentioned purpose.
- I don't know

*Links to relevant material*

2. Beyond the minimal set of elements listed in the previous question, are there **other elements** that should be included in **information and documentation** by general-purpose AI model providers to providers of AI systems to achieve the above-mentioned purpose?

- Yes
- No
- I don't know

*Links to relevant material*

## **B. Technical documentation by general-purpose AI model providers to the AI Office and the national competent authorities**

In addition to the provision of information on the general-purpose AI model for its usage by the downstream providers, technical documentation should be prepared and kept up to date by the general-purpose AI model provider for the purpose of making it available, upon request, to the AI Office and the national competent authorities.

A minimal set of elements of such technical documentation of the general-purpose AI model to be made available by providers, upon request, to the AI Office and the national competent authorities is already set out in AI Act Annex XI.

3. In the **current state of the art**, for which elements of **documentation** by general-purpose AI model providers do practices exist that, in your view, provide a **necessary level of information for the above-mentioned purpose**?

From the list below following AI Act Annex XI, please select all relevant elements.

If such practices exist, please provide **links to relevant material** substantiating your reply, such as model cards, data sheets or templates.

**A general description of the general-purpose AI model including:**

- The tasks that the model is intended to perform and the type and nature of AI systems into which it can be integrated;**
- The acceptable use policies applicable;**
- The date of release and methods of distribution;**
- The architecture and number of parameters;**
- The modality (e.g., text, image) and format of inputs and outputs;**
- The licence.**

**A description of the elements of the model, and relevant information of the process for the development, including:**

- ❑ **The technical means (e.g., instructions for use, infrastructure, tools) required for the general-purpose AI model to be integrated into AI systems;**
- ❑ **The design specifications of the model and training process**, including training methodologies and techniques, the key design choices including the rationale and assumptions made; what the model is designed to optimise for and the relevance of the different parameters, as applicable;
- ❑ **Information on the data used for training, testing and validation**, where applicable, including the type and provenance of data and curation methodologies (e.g. cleaning, filtering etc), the number of data points, their scope and main characteristics; how the data was obtained and selected as well as all other measures to detect the unsuitability of data sources and methods to detect identifiable biases, where applicable;
- ❑ **the computational resources used to train the model** (e.g. number of floating point operations), training time, and other relevant details related to the training;
- ❑ **known or estimated energy consumption of the model.**

**Additional information to be provided by providers of general-purpose AI models with systemic risk:**

- ❑ **A detailed description of the evaluation strategies**, including evaluation results, on the basis of available public evaluation protocols and tools or otherwise of other evaluation methodologies. Evaluation strategies shall include evaluation criteria, metrics and the methodology on the identification of limitations;
- ❑ **Where applicable, a detailed description of the measures put in place for the purpose of conducting internal and/or external adversarial testing** (e.g., red teaming), model adaptations, including alignment and fine-tuning;
- ❑ **Where applicable, a detailed description of the system architecture** explaining how software components build or feed into each other and integrate into the overall processing;

Alternatively:

- ❑ No practices for any of the listed elements exist that achieve the above-mentioned purpose.
- ❑ I don't know

*Links to relevant material*

4. Beyond the minimal set of elements listed in the previous question, are there **other elements** that should, in your view, be included in **technical documentation** by general-purpose AI model providers **to the AI Office** and the national competent authorities?

- Yes
- No
- I don't know

*Links to relevant material*

### **C. Policy to respect Union copyright law**

The AI Act requires providers of general-purpose AI models to put in place a policy to comply with Union law on copyright and related rights, and in particular to identify and comply with, including through state-of-the-art technologies, a reservation of rights expressed pursuant to Article 4(3) of Directive (EU) 2019/790.

5. What are, in your view, the main **elements that need to be included in the policy** that providers of general-purpose AI models have to put in place to **comply with Union law on copyright** and related rights, as required by the AI Act?

Please select all relevant options from the list of options suggested below. If selected, please elaborate further on the content of the measures and provide links to any good practices you are aware of.

- Allocation of responsibility within the organisation for the implementation and monitoring of compliance with the policy and the measures therein;
- Measures to identify and comply with the rights reservation from the text and data mining exception pursuant to Article 4(3) of Directive (EU) 2019/790;
- Measures to obtain the authorisation from right holders, where applicable;

- Measures to detect and remove collected copyright protected content for which rights reservation from the text and data mining exception has been expressed pursuant to Article 4(3) of Directive (EU) 2019/790;
- Measures to prevent the generation, in the outputs of the model, of copyright infringing content;
- Means for contact with rightsholders;
- Measures for complaint handling from rightsholders;
- Other
- I don't know

### *Please specify*

*700 character(s) maximum*

Strong user rights safeguards to mitigate the risks to freedom of expression and the right to information of the users of AI systems. This requirement should apply when the model provider is also a system provider and the provider deploys automated measures to prevent the generation, in the outputs of the model, of copyright infringing content, regardless of whether these measures are based on a legal requirement, contractual obligation or as part of a voluntary commitment.

### *Your comments*

*700 character(s) maximum*

The policy has to consider: 1) legal basis for use (e.g. Public Domain, L&E, licences, open licences); 2) different identification strategies used by rights holders to opt-out; 3) granular vocabulary for opting out (e.g. no-generative-ai); 4) the effect of the opt-out. An opt-out shall require that the provider does not use the opted-out work to train new models, but shall not require the works to be removed from models that have already been trained, as that is not technically possible currently. The opt-out cut-off date after which opt-outs can no longer be considered shall be publicly communicated. Any measures to prevent copyright infringements must comply with users rights safeguards.

Available at: [https://openfuture.eu/wp-content/uploads/2024/05/240516considerations\\_of\\_opt-out\\_compliance\\_policies.pdf](https://openfuture.eu/wp-content/uploads/2024/05/240516considerations_of_opt-out_compliance_policies.pdf)

Nobre, T. (2024, May) The Post-DSM Copyright Report: Article 17. Available at: <https://communia-association.org/2024/05/13/the-post-dsm-copyright-report-article-17/>

6. How can, in your view, the policy to be put in place by providers of general-purpose AI models to comply with Union copyright law ensure that providers of those models comply with the **existing solutions for the expression of the text and data mining rights reservation**, pursuant to Article 4(3) of Directive (EU) 2019 /790?

Please explain how this can be achieved and specify from the list below the state-of-the-art technologies you are aware of to identify and comply with the right reservations expressed by rightholders, providing further information and examples.

- Technologies/tools that identify right reservations at the website/domain level
- Technologies/tools that identify right reservations at work level
- Technologies/tools that aggregate the expression of right reservations
- Other
- I don't know

### *Your comments*

*700 character(s) maximum*

As right holders use different distribution strategies, providers should be able to account for machine-readable location-based and unit-based identifiers. Indeed, the former can only be set by entities that have control over the domains in question, which may not be the actual rights holders. Unit-based identifiers allow rightholders to reserve rights in a more granular way and regardless of where the files are hosted, being better suited for works that circulate as independent media files. A small number of standardised identifiers is recommended to increase legal certainty and streamline opt-out processes. A public registry for recording opt-outs is also advisable.

Available at: [https://openfuture.eu/wp-content/uploads/2024/05/240516considerations\\_of\\_opt-out\\_compliance\\_policies.pdf](https://openfuture.eu/wp-content/uploads/2024/05/240516considerations_of_opt-out_compliance_policies.pdf)

## **D. Summary about content used for the training of general-purpose AI models**

The AI Act requires providers to draw up and make publicly available a sufficiently detailed summary about the content used for training of the general-purpose AI model, according to a template provided by the AI Office. While due account should be taken of the need to protect trade secrets and confidential

business information, the summary is to be generally comprehensive in its scope instead of technically detailed to facilitate parties with legitimate interests, including copyright holders, to exercise and enforce their rights under Union law. The template that should be drafted by the AI Office for the sufficiently detailed summary should be simple, effective, and allow providers to provide the required summary in narrative form.

7. What are in your view the **categories of information** sources that should be presented in the summary to ensure that it comprehensively describes the main sources of data used for the training of the general-purpose AI model?

From the list below, please select all options that you consider relevant.

- Public/ open data repositories
- Content/data publicly available online (e.g. scraped from the internet)
- Proprietary data generated by the provider
- User-generated data obtained through the services or products provided by the provider
- Copyright protected content licensed by rightsholders
- Other data/content or data sets acquired from third parties (e.g. licensed proprietary databases, data acquired from datahubs, public interest institutions such as libraries etc.)
- Synthetically generated data
- Other
- I don't know

If selected, please **specify the level of granularity/detail for each of the selected options**, keeping in mind that AI Act requires the summary to be comprehensive instead of technically detailed and provided in a narrative form to facilitate parties with legitimate interests, including rightsholders, to exercise and enforce their rights under Union law, while taking due account of the need to protect providers' trade secrets and confidential business information. If additional categories should be considered, please specify them and the level of granularity/detail. You can motivate your choice and provide links to any good practices.

*700 character(s) maximum*

The summary should include a listing of the primary data collections or sets used and a description of other data sources used in all stages of model training. The summary should contain sufficient technical detail to provide meaningful and comprehensive information for all relevant stakeholders (e.g. creators, users, researchers, data subjects), taking into account that the categories of rights that justify access to this information include not only copyright, but also freedom of expression, research rights, privacy rights, etc. The description should, for scraped online data, include a weighted list of the top domains and, for licensed data, indicate whether the licence is exclusive.

### *Links to relevant material*

Warso, Z., Gahntz, M. and Keller, P. (2024, June) Sufficiently Detailed? A proposal for implementing the AI Act's training data transparency requirement for GPAI, Open Future. Available at: [https://openfuture.eu/wp-content/uploads/2024/06/240618AIAtransparency\\_template\\_requirements-2.pdf](https://openfuture.eu/wp-content/uploads/2024/06/240618AIAtransparency_template_requirements-2.pdf)

8. In your view, should the summary include one or more of the following **characteristics/information about the data used for the training**/of the general-purpose AI model in order to facilitate parties with legitimate interests, including copyright holders, to enforce their rights under Union law?

Please select all relevant options from the list of options suggested below. If selected, please explain your choice and provide links to any good practices.

- Modalities / type of data (text, images, videos, music, etc);
- Nature of the data (personal, non-personal or mixed);
- Time of acquisition/collection of the data;
- Data range of the data (e.g. time span), including date cutoffs
- In case of data scraped from the internet, information about the crawlers used;
- Information about diversity of the data (for example linguistic, geographical, demographic diversity);
- Percentage of each of the main data sources to the overall training/fine-tuning;
- Legal basis for the processing under Union copyright law and data protection law, as applicable;
- Measures taken to address risks to parties with legitimate interests (e.g. measures to identify and respect opt-out from the text and data mining exception, respect data protection and address privacy risks, bias, generation of illegal or harmful content;
- Other
- I don't know

*Your comments*

700 character(s) maximum

When the model provider is also a system provider, the summary must detail the measures taken to mitigate the risks to freedom of expression and the right to information of the users of AI systems. Users rights safeguards are particularly important when the provider has put in place measures to prevent copyright infringements (e.g. automatic content recognition and filtering tools), since existing tools are efficient at identifying content, but incapable of understanding the context in which content is used and, thus, often fail to recognise perfectly legitimate uses, such as quotations and parodies. Automated measures must thus comply with such users safeguards (see Art. 17 DSM Directive).

### *Link to relevant material*

Warso, Z., Gahntz, M. and Keller, P. (2024, June) Sufficiently Detailed? A proposal for implementing the AI Act's training data transparency requirement for GPAI, Open Future. Available at: [https://openfuture.eu/wp-content/uploads/2024/06/240618AIAtransparency\\_template\\_requirements-2.pdf](https://openfuture.eu/wp-content/uploads/2024/06/240618AIAtransparency_template_requirements-2.pdf)

Nobre, T. (2024, May) The Post-DSM Copyright Report: Article 17. Available at: <https://communia-association.org/2024/05/13/the-post-dsm-copyright-report-article-17/>

9. Considering the purpose of the summary to provide **meaningful information to facilitate the exercise of the rights** of parties with legitimate interests under Union law, while taking due account of the need to respect **business confidentiality and trade secrets** of providers, what **types of information** in your view are **justified not to be disclosed** in the summary as being not necessary or disproportionate for its purpose described above?

700 character(s) maximum

Business confidentiality and trade secrets of providers should not be used to prevent the disclosure of the information identified in the answers 5 to 8 above.

## Section 2. General-purpose AI models with systemic risk: risk taxonomy, assessment and mitigation

---

### **A. Risk taxonomy**

Some general-purpose AI models could pose systemic risks, which should be understood to increase with model capabilities and model reach and can arise along the entire lifecycle of the model.

‘Systemic risks’ refer to risks that are specific to the high-impact capabilities of general-purpose AI models (matching or exceeding the capabilities of the most advanced general-purpose AI models); have a significant impact on the Union market due to their reach; or are due to actual or reasonably foreseeable

negative effects on public health, safety, public security, fundamental rights, or society as a whole, that can be propagated at scale across the value chain (AI Act Article 3(65)).

Systemic risks are influenced by conditions of misuse, model reliability, model fairness and model security, the level of autonomy of the model, its access to tools, novel or combined modalities, release and distribution strategies, the potential to remove guardrails and other factors.

The Code of Practice should help to establish a risk taxonomy of the type and nature of the systemic risks at Union level, including their sources. The Code should take into account international approaches.

10. Do you consider the following list of **systemic risks** based on AI Act Recital 110 and international approaches to be comprehensive to inform a taxonomy of systemic risks from general-purpose AI models? If additional risks should be considered in your view, please specify.

### **Systemic risk from model malfunctions**

- **Harmful bias and discrimination:** The ways in which models can give rise to harmful bias and discrimination with risks to individuals, communities or societies.
- **Misinformation and harming privacy:** The dissemination of illegal or false content and facilitation of harming privacy with threats to democratic values and human rights.
- **Major accidents:** Risks in relation to major accidents and disruptions of critical sectors, that a particular event could lead to a chain reaction with considerable negative effects that could affect up to an entire city, an entire domain activity or an entire community.
- **Loss of control:** Unintended issues of control relating to alignment with human intent, the effects of interaction and tool use, including for example the capacity to control physical systems, 'self-replicating' or training other models.

### **Systemic risk from malicious use**

- **Disinformation:** The facilitation of disinformation and manipulation of public opinion with threats to democratic values and human rights.
- **Chemical, biological, radiological, and nuclear risks:** Dual-use science risks related to ways in which barriers to entry can be lowered, including for weapons development, design acquisition, or use.
- **Cyber offence:** Risks related to offensive cyber capabilities such as the ways in which vulnerability discovery, exploitation, or operational use can be enabled.

**Other systemic risks, with reasonably foreseeable negative effects on**

- **public health**
- **safety**
- **democratic processes**
- **public and economic security**
- **fundamental rights**
- **the society as a whole.**

- Yes, this list of systemic risks is comprehensive.
- Further or more specific systemic risks should be considered.
- I don't know

11. What are in your view **sources of systemic risks** that may stem from the development, the placing on the market, or the use of general-purpose AI models? Systemic risks should be understood to increase with model capabilities and model reach.

Please select all relevant elements from the list. If additional sources should be considered, please specify. You can also provide details on any of the sources or other considerations.

- Level of autonomy of the model:** The degree to which a general-purpose AI model has the capability to autonomously interact with the world, plan ahead, and pursue goals.
- Adaptability to learn new, distinct tasks:** The capability of a model to independently acquire skills for different types of tasks.
- Access to tools:** A model gaining access to tools, such as databases or web browsers, and other affordances in its environment.

- Novel or combined modalities:** Modalities a model can process as input and generate as output, such as text, images, video, audio or robotic actions.
- Release and distribution strategies:** The way a model is released, such as under free and open-source license, or otherwise made available on the market.
- Potential to remove guardrails:** The ability to bypass or disable pre-defined safety constraints or boundaries set up to ensure a model operates within desired parameters and avoids unintended or harmful outcomes.
- Amount of computation used for training the model:** Cumulative amount of computation ('compute') used for model training measured in floating point operations as one of the relevant approximations for model capabilities.
- Data set used for training the model:** Quality or size of the data set used for training the model as a factor influencing model capabilities.
- Other**
- I don't know**

*Your comments*

*700 character(s) maximum*

## **B. Risk identification and assessment measures**

In light of potential systemic risks, the AI Act puts in place effective rules and oversight. Providers of general-purpose AI models with systemic risks should continuously assess and mitigate systemic risks.

The Code of Practice should be focused on specific risk assessment measures for general-purpose AI models with systemic risk. Following the risk taxonomy, **appropriate measures could be applied to assess different systemic risks, tailored to each specific type and nature of risk**, including their sources.

In addition to further risk assessment measures which will be detailed out in the Code of Practice, the AI Act requires providers to perform the necessary model evaluations, in particular prior to its first placing on the market, including conducting and documenting adversarial testing of the model, also, as appropriate, through internal or independent external testing.

The following concerns technical risk assessment measures, including model evaluation and adversarial testing. This is in line with the focus of the Code of Practice Working Group 2 “Risk identification and assessment measures for systemic risks”.

12. How can the effective implementation of **risk assessment measures reflect differences in size and capacity** between various providers such as SMEs and start-ups?

700 character(s) maximum

13. In the **current state of the art**, which specific **risk assessment measures** should, in your view, general-purpose AI model providers take to effectively assess systemic risks along the entire model lifecycle, in addition to evaluation and testing?

Please **indicate to what extent you agree** that providers should take the risk assessment measures from the list. You can add additional measures and provide details on any of the measures, such as what is required for measures to be effective in practice.

| Potential risk assessment measures   | Strongly agree        | Somewhat agree        | Neither agree nor disagree | Disagree              | I don't know          |
|--|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|

14. Please provide **links to relevant material** on state-of-the-art risk assessment measures, such as model cards, data sheets, templates or other publications.

15. In the **current state of the art**, which specific practices related to **model evaluations** should, in your view, general-purpose AI model providers take with a view to identifying and mitigating systemic risks?

Model evaluations can include various techniques, such as benchmarks and automated tests, red teaming and adversarial testing including stress testing and boundary testing, white-box evaluations with model explanation and interpretability techniques, and sociotechnical evaluations like field testing, user studies or uplift studies.

Please **indicate to what extent you agree** that providers should implement the practice from the list. You can add additional practices and provide details on any of the practices. You can also indicate which model evaluation techniques listed above or which other techniques can reliably assess which specific systemic risks.

| Potential evaluation practices  | Strongly agree        | Somewhat agree        | Neither agree nor disagree | Disagree              | I don't know          |
|---|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|
| <b>Performing evaluations at several checkpoints</b> throughout the model lifecycle, in particular <b>during development and prior to internal deployment</b>   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Performing evaluations at several checkpoints</b> throughout the model lifecycle, in particular <b>when the model risk profile changes</b> such as with access to tools or with different release strategies | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Ensuring evaluations inform model deployment in real-world conditions</b>  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Ensuring evaluations provide insights into the degree to which a model introduces or exacerbates risks</b>   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Using non-public model evaluations</b> , as appropriate  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |

16. Please provide **links to relevant material** on state-of-the-art model evaluation practices, such as model cards, data sheets, templates or other publications.

17. What are the **greatest challenges** that a general-purpose AI model provider could face in implementing risk assessment measures, including model evaluations?

*700 character(s) maximum*

## C. Technical risk mitigation

Codes of Practice should also be focused on specific risk mitigation measures for general-purpose AI models with systemic risk. Following the risk taxonomy, **appropriate measures could be applied to mitigate different systemic risks, tailored to each specific type and nature of risk**, including their sources.

**The following concerns technical risk mitigation measures, including cybersecurity protection for the general-purpose AI model and the physical infrastructure of the model.** Measures can relate to model design,

development or deployment.

This is in line with the focus of the Code of Practice Working Group 3 “Risk mitigation measures for systemic risks”.

18. How can the effective implementation of **technical risk mitigation measures reflect differences in size and capacity** between various providers such as SMEs and start-ups?

700 character(s) maximum

19. In the **current state of the art**, which specific **technical risk mitigation measures** should, in your view, general-purpose AI model providers take to effectively mitigate systemic risks along the entire model lifecycle, *in addition to cybersecurity protection*?

Please **indicate to what extent you agree** that providers should take the measures from the list. You can add additional measures and provide details on any of the measures, such as what is required for measures to be effective in practice.

| Potential technical risk assessment measures   | Strongly agree        | Somewhat agree        | Neither agree nor disagree | Disagree              | I don't know          |
|--|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|
| <b>Data governance</b> such as data selection, cleaning, quality control   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Model design and development to achieve an appropriate level of trustworthiness characteristics</b> such as model reliability, fairness or security | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Fine-tuning for trustworthiness</b> and alignment such as through Reinforcement Learning from Human Feedback (RLHF) or Constitutional AI            | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Unlearning techniques</b> such as to remove specific harmful capabilities from models   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |
| <b>Technical deployment guardrails</b> , such as content and other filters,  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |

|   |                       |                       |                       |                       |                       |
|---|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| capability restrictions, fine-tuning restrictions or monitoring-based restrictions in case of misuse by users |                       |                       |                       |                       |                       |
| <b>Mitigation measures relating to the model architecture, components, access to tools or model autonomy</b>  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| <b>Detection, labelling and other measures related to AI-generated or manipulated content</b>                 | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

### Section 3. Reviewing and monitoring of the General-Purpose AI Code of Practice

---

The process of drawing-up the first Code of Practice will start immediately after the AI Act enters into force and will last for 9 months, in view of enabling providers of general-purpose AI models to demonstrate compliance on time. The AI Office shall aim to ensure that the Code of Practice clearly sets out their specific objectives and contains commitments or measures, including key

performance indicators as appropriate, to ensure the achievement of those objectives.

The AI Office shall aim to ensure that participants to the Code of Practice report regularly to the AI Office on the implementation of the commitments and the measures taken and their outcomes, including as measured against the key performance indicators as appropriate. Key performance indicators and reporting commitments shall reflect differences in size and capacity between various participants. The AI Office and the Board shall regularly monitor and evaluate the achievement of the objectives of the Code of Practice by the participants and their contribution to the proper application of this Regulation.

The AI Office shall, as appropriate, encourage and facilitate the review and adaptation of the Code of Practice.

26. What are examples of **key performance indicators** which are, in your view, effective to measure the compliance of participants with the objectives and measures which will be established by the Code of Practice?

*700 character(s) maximum*

*Links to relevant material*

27. How can **key performance indicators and reporting commitments** for providers **reflect differences in size and capacity** between various providers such as SMEs and start-ups?

28. Which aspects should inform the timing of **review and adaptation of the content of the Code of Practice** for general-purpose AI models in order to ensure that the **state of the art** is reflected? This does not necessarily imply a complete

review, but can only involve pertinent parts.

Please rank all relevant aspects from the following list from 1 to 4 (1 being the most important). You can add additional aspects and provide details on any of the aspects or other considerations under "Specify".

|  | Rank 1                | Rank 2                | Rank 3                | Rank 4                |
|--|-----------------------|-----------------------|-----------------------|-----------------------|
| <b>Pre-planned intervals to assess the need for revision:</b><br>Assessments of whether the content of the Code of Practice for general-purpose AI models needs to be revised or adapted should be pre-planned for specific time intervals.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| <b>Alerts by independent experts or other stakeholders:</b> Alerts by selected independent experts, such as by the Scientific Panel which will be set up in the AI Act governance structure, or by other stakeholders such as downstream providers, academia or civil society should inform a revision of the content of the Code of Practice. | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| <b>Monitoring and foresight:</b> Independent monitoring and foresight related to the AI ecosystem, technological and market developments, emergence of systemic risks and any other relevant trends, such as related to sources of risks like model autonomy, should inform a revision of the content of the Code of Practice                  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| <b>Other</b>   | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

Option to upload a document for additional information

You have the option to upload one document to share further information with the AI Office. Please download the template that is structured along the topics covered by the Code of Practice Working Groups. Based on the submissions and answers to the targeted questions, a first draft of the Code of Practice will be developed.

Please upload your document in a doc or docx format, instead of pdf or similar.

[Template for free-text submissions.docx](#)

Please upload your file(s)

Only files of the type doc,docx are allowed

Thank you
